

System Components

A gauge head is only one part of a complete tank level indication system, so Hawkeye offers everything required to complete the indication system, including floats and float guides, anchors, indicators and gauge boards with volume / height decals made to your specification.

Polyethylene Floats

The standard polyethylene float boasts integrated float guides and cable. PE floats are molded from LLDPE material, and suitable for use up to 80°C. The resilient float is designed to work in harmony with the Hawkeye Indicator, but can also replace third-party floats.

Stainless Steel Floats

Hawkeye makes both horizontal stainless steel floats to replace the polyethylene float when conditions dictate, but also vertical floats for use with still wells, retractable gauge heads, or other applications where there are close fits, or float guide kits are not available. All stainless floats are 316L, and come with an integrated pigtail cable connection system. Horizontal floats also come with float guides.

Float Guide Kits

Spring-loaded cable tensioners anchor float guide cable to the top of the tank, ensuring accurate and responsive float performance.

Anchor Plates

Anchors the float guide cables to the floor of the tank when welding clips to the floor is not appropriate.

Indicator and Guide Kit

Zinc plated indicator comes with integrated cable connection, making installation a snap. Indicator guide kit comes with top and bottom mounting brackets, including an idler pulley assembly with cable retention features, ensuring no jumped cables.

Gauge Boards and Decals

Anodized aluminum gauge boards for tanks 1 to 32+ ft come complete with UV-Resistant graduated volume or height decals, customized to application, already applied. Volumetric decals are graduated in cubic metres (m^3) and come in blue; linear height decals are graduated in metres (m) and come in red.

Gauge Board Mounting Clips

Standard weld-on gauge board mounting clips are available for attaching the gauge board to the tank. Additionally, magnetic clips are available when welding to the tank is not an option.
